Alcohol and Substance Use Disorders Research Program Public Request for Information

Deadline for response: January 5th, 2024, 4pm EST
Maximum Length: unspecified

Purpose: The Congressionally Directed Medical Research Programs (CDMRP) represents a unique partnership between the U.S. Congress, the military, and the public to fund innovative and impactful medical research. The Alcohol and Substance Use Disorders Research Program's (ASUDRP) mission is to explore integrated approaches to address alcohol and substance use disorders and reduce the number of opioid and other substance use-related deaths, through multi-disciplinary, team-based research efforts that translate basic knowledge into enhanced clinical pharmacological treatment protocols and enhanced quality of life for Service Members, Veterans, and the American public. Here they request recommendations on areas of emphasis and associated research funding opportunities.

Questions:

1. Keeping in mind the mission of the ASUDRP, are there critical gaps in the field that are not addressed by these areas of emphasis? If yes, please specify.
2. In your opinion, which of the following research areas is most underfunded in pharmacotherapies for ASUD with comorbid PTSD and/or TBI research and, if funded, could make a significant impact on the state of the science and clinical outcomes?
